FireSafe Foliage®

FireSafe LIFETIME WARRANTY

IFR Qualities are Permanent for the Life of the Foliage

In the 1970's Autograph Foliages was a pioneer in the development of Inherent Fire Retardant artificial plants and trees. Disney approached Autograph's founder, Alvis Barrier, P.E., to develop artificial foliage to be fire resistant for the construction of Walt Disney's Epcot. Since then, Autograph has developed a large line of realistic IFR (Inherent Fire Retardant) Plants, Trees, Grasses, Greenwall Foliage, Branches, and Florals.

Specified by Architects, Commercial and Professional Plantscape Contractors, Decorators, Fire Marshals, Local, State, and Federal Government (GSA) and Building Safety Managers, Autograph's FireSafe Products and Standards are used internationally.

Autograph's Fabric (Polyester) FireSafe Foliage are tested at a certified lab facility under their strict requirements. Certification and Reporting are updated regularly. Due to our large and growing inventory of IFR foliage, testing can be expanded.

U.S.A. and International Fire Testing & Documentation Includes:

U.S. National Fire Prevention Association 701 Test for Non-Flammability | Passing for Fabric and Plastic FR Material.

U.S. ASTM-E84-16 Standard Test Methods for Surface Burning Characteristics of Building Material. Passes Class 1 or Class A for Fabric and/PVC Material. PVC material is Inherently Fire Retardant.

California State Fire Marshall Certification – Registered Flame Resistant Product – Registration No. F-37201 for Fabric Material

Wiretec British Standard Fire Retardant Tests – Passing BS 476 Part 6 and BS 476 Part 7 Fire Rating

Toxicity and Pyrolysis Test – Singapore for Polyester Material

CAN/ULC S109-14 Standard for Flame Tests of Flame Resistant Fabric and Films | Passing Polyester Fabrics

Other Testing Available Upon Request. IFR Testing is also published under the following designations: ANSI 2.5, NFPA 244, UBC 8-1 (42-1) UL 73.

Autograph's Inherent Fire Retardant foliage will NOT wash off, dissipate, drip off, or leave a messy, oily film. Our Fire Retardant foliage becomes less flammable with age! The fire retardant is impregnated directly into the fabric and polyethylene foliage prior to printing and injection molding.

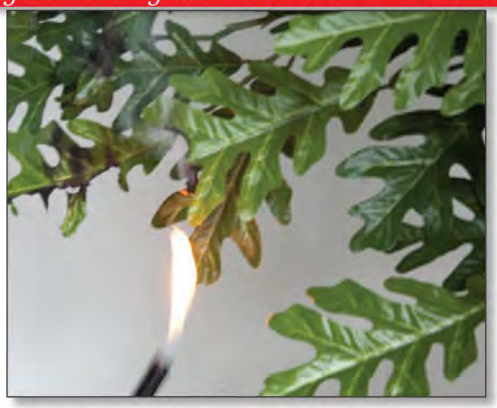

All Inherent Fire Retardant Foliage will have a "R" in prefix and be indicated with Fire Retardant symbol.
Fire Retardant Prefix Item Codes Include: AR, AUR, PR, PUR, DR, JR, WR

Illustration of Foliage Subject To Flame Ignition & Smoke Development During Testing. Comparing Regular Foliage vs. Inherent Fire Retardant Foliage.

IFR

Flame applied to fabric leaf with steady ignition

Flame removed, no self ignition

Flame self extinguishes, no secondary ignition

NON-IFR

Flame applied to fabric leaf with steady ignition

Flame removed resulting in increased ignition and flame spread

Continued burning and self ignition
